

i received my 2 rear wheels on wed. and I went straight to the tire place and got the tires put on! Here I am sending you pictures of the wheels after they widened them in the rear from 9.5 to 12.5 inches.

The wheels are only presented to the body they are in no way close to being installed. I am now working on the front suspension. I am doing a Front and Rear Corvette Brake and Rotors to have the Big Brake look. The Fiero rotors are too small. And Corvette also has bigger and better performance brake calipers. And i also ordered the Drilled and slotted rotors for even better looks and performance! Will send you pictures as soon as i receive them.

Have a Great Week.

-Felipe
