

Working in the Rollup Glass

Just wanted to say hi, hope you are doing great...here is a picture of the diabolic with the glass (presented only, not anywhere near installed). I have a lot of work on the doors...and yes the doors are a bit confusing but it won't stop me from perfecting them! I'm also working on rear quarter glass, As you can already see I now have the original look on that scoop near the quarter glass. Tomorrow I should be done with both quarter glass. I am also working on headliner. Will send you pictures of that as well. Have a great Weekend.

This is the cutting place, for AGP glass to fit. Now I need to fiberglass in the gap on bottom, and re-Shape the Air Vent.

Glass fit so good it holds by itself. (this was after I cut the body)
